California Office

Missouri Office

With the addition of American Heavy Moving & Rigging's new facility in Mound City, Missouri we're able to competitively expand our operations to service the entire Continental United States.

WHO WE ARE & WHAT WE DO

American Heavy Moving & Rigging is a family-owned heavy haul company that has been in the business of moving heavy and oversized cargo for over thirty-five years. We service industries from petrochemical, to power utilities, to automotive throughout California. Now, with our new facility in Missouri, we've expanded our coverage area to handle the whole continental United States. With an emphasis on safety and efficient transportation, we conduct all our moves with extreme care.

Our team of foremen, estimators, and drivers all work together to bring you the best transportation services possible. Our team cares about the safety of your cargo, and will take every measure to ensure your cargo arrives on time and in excellent condition.

We are innovators in our industry, and can move anything given our cutting edge technology and techniques. Our fleet of trailers incorporates the most recent technology in the field, and allows us to transport cargo over roads and through cities with skill and precision.

We are dedicated to straightforward business practices and believe that clear contracts save everyone time and money. We promise one clear price for any transportation job, without any extra costs hidden in the contracts.

In our thirty-five plus years of service, we have developed exceptional relationships with agencies involved in the heavy haul industry across the country. Our knowledgeable permitting staff works closely with municipal and state governments and transport authorities to ensure your job is processed and completed as quickly and efficiently as possible.

We mean it when we say...we can move anything.

START TO FINISH MOVES

Loading a nuclear reactor using jacking & rigging

Loading

We arrive on time at the loading location for the cargo and load it onto our trucks, using innovative equipment that minimizes movement of the cargo, thus reducing risk.

The cargo is fully insured the moment we begin the job, so you can rest assured knowing your cargo is in good hands

Receiving cargo in port

Transportation

Before we begin any job, we do a thorough evaluation of the route that the cargo will travel. We bring all the equipment needed to navigate any obstacle, from weight-restricted roads to bridges.

Excellent relationships with permitting agencies, allow us to work quickly and efficiently.

Delivering an oversized rotor to its final destination

Delivery

We deliver the cargo to its final destination right on schedule. Our deliveries are low-impact and non-intrusive, so day-to-day business operations are rarely interrupted by a delivery.

Cargo is unloaded using the same care and innovative techniques as loading, to ensure a safe delivery.

INNOVATIVE TECHNIQUES

Utilizing advanced technology and techniques we have perfected the art of safe and efficient heavy haul transportation. The key to safe transport is eliminating unnecessary steps and movement, thus keeping cargo secure.

The jacking & rigging technique was used to place the Grand Canyon Skywalk with precision placement and lift

The Alpha 1 dual lane trailer

Our trucks are uniquely designed to minimize additional movement. We can precisely slide cargo onto pads or even bring the trucks around the cargo and secure it from the sides. Our trucks are able to adjust their axles while load bearing to adapt to changing road conditions without putting cargo at risk from additional loading and unloading.

INNOVATIVE EQUIPMENT

Sometimes a job provides a unique challenge that requires specialized technology. We have state-of-the-art equipment to tackle these challenges, and if the right tool doesn't exist, we'll invent it.

Our fleet of trailers is equipped to transport any type of cargo. Our highly innovative, dual-lane trailers include:

- Alpha 1
- Alpha 2
- Aspen 8 Line
- Multiple lines of off-highway platform trailers
- Dual Max

Our most recent acquisition is the Dual-Max Trailer, a modular platform trailer that is widenable while load bearing, to meet the specific transport needs of a greater number of streets across the United States.

These trailers were acquired in response to a need for our trailers to change their axle lengths to accommodate various weight and width requirements while traversing through city streets.

Being able to adjust the axle width while load bearing makes the transport job faster and therefore more cost efficient.

The trailer even folds up when the job is finished, allowing it to return in a single lane of traffic, saving time and money.

THOROUGH PREPARATIONS

Evaluations

We analyze every road, bridge, overpass and tunnel to ensure safe and efficient transport.

Fast Permitting

We get permits quickly, due to excellent relationships with local governments and agencies.

RELIABLE PREPARATIONS

Route Evaluations

We always conduct extensive road evaluations to ensure we know what exact conditions the cargo will be traveling through. We map out weight distribution restrictions, account for any unique situations such as bridges or overpasses and set up the equipment and techniques necessary to provide a safe and efficient transport.

Permitting

Due to our excellent relationships with permitting agencies such as Caltrans and governments across the country, we can complete the permit process quickly to ensure cargo arrives at its final destination on time. We have strong relationships with transport agencies (such as the CHP) giving us the assistance needed to transport cargo across highways.

RELIABLE DEADLINES

Due to our thorough evaluations and quick permitting we are uniquely situated to deliver cargo on time.

We design all our equipment and choose techniques with speed and safety in mind. Eliminating additional steps and movement not only increases the safety of transport, but also reduces any extraneous steps providing a quick, efficient transport of heavy and oversized cargo.

CLARITY IN CONTRACTS

Our contracts are always clear and straightforward. The cost we quote is the final price. We believe that when both parties know exactly what to expect, business can move forward quickly and efficiently - which is what we care about.

ESTABLISHED RELATIONSHIPS

We have a proven track record of excellent service. We have been serving companies across the United States for over thirty-five years and our established relationships speak for themselves. Our clients come back to us time and again for their heavy haul and oversize moves. Our reputation for safety and speed makes us their first choice for over the road transportation.

Pacific Gas and Electric Company

EXCELLENCE IN SAFETY

Outstanding Safety Record

We have an outstanding safety record and an incredibly low level of accidents.

In fact, in the past 35 years we have moved 1,000s of heavy haul loads with an incredibly low incident rate. Our focus on safety ensures that cargo we move is always in good hands.

Comprehensive Safety Measures

Every element of transportation is driven by safety. From our detailed route evaluations to techniques and specialized equipment designed to reduce movement of cargo, we work hard to optimize safety throughout transportation.

Because of our safety record, we have been entrusted with moving a wide variety of heavy haul cargo from nuclear reactors, to oil rigs, to historical homes, and more.

Our clients return to us again and again, because they know their equipment and cargo will be safe with us.

Fully Insured

We fully insure every job's cargo from start to finish. Whether we are moving a transformer, nuclear reactor, or a historical home, the entire job is covered from the moment we start loading to the final placement.

Safety First.
